

Three 3<sup>rd</sup> graders are talking about why anoles that live in the city have ~~bigger toe pads~~ bigger toe pads than anoles that live in the forest.

*I think city anoles needed bigger toe pads to climb hard surfaces so they changed because they needed to.*

*I think city anoles with smaller toe pads had offspring that always had bigger toe pads when they grew up.*

*I think city anoles with bigger toe pads could climb higher so they were healthier and had more offspring with bigger toe pads.*

Sam

Jeita

Lee

**Do you agree or disagree with each person's idea?**

**Sam:** *I think city anoles needed bigger toe pads to climb hard surfaces, so they changed because they needed to.*
